Enroller
Quick Start Guide

1. Download the management app at https://whitelaketechnology.com/enroller
2. Unzip the file.
3. Run the .exe inside. Your browser will open and you will see the app.
4. Select the playbook that matches your version of ChromeOS (see below if you're unsure) & fill out your wifi and enrollment user information.
5. Click 'Save Settings'
6. Plug in your Enrollers. They will update automatically. Once they turn from red to green they are ready to use.
   a. Note: Enrollers can be unplugged at any time without safely ejecting.
7. Boot up a new Chromebook.
8. **Wait for the ChromeVox popup to appear before continuing.**
9. Plug in an Enroller and it will go to work.

What version of ChromeOS does my Chromebook have?

Boot up a new Chromebook (dismiss the ChromeVox popup if it gets in the way), then press **Alt + V**. In the top-right corner you will see 'Google Chrome XX…' where XX is the version number. Restart the Chromebook to bring it back to a good state for enrollment.
